

Tender workflow automation · East Africa

Win more tenders. Without the admin..

Gulawo takes East African SME contractors from tender discovery to a compliant, priced submission — and gives buyers a block-based builder and evaluation workflow.

Gulawo · Pitch Deck

The problem

Government and corporate tenders are the fastest-growing revenue channel for East African SMEs — but most lose them for reasons unrelated to ability.

Fragmented discovery

Tenders are scattered across PPDA, e-GP, World Bank and corporate portals in 4 countries. Teams miss opportunities daily.

Disqualifying paperwork

Missing certificates, wrong bid security, expired TINs. One missing box = automatic disqualification, no matter how good the bid.

Deadlines & manual work

Spreads in Excel, documents in folders, no alerts. Bids die silently.

For buyers: no pipeline

Procurement teams rebuild tender documents from scratch and evaluate bids in spreadsheets.

The market

Public procurement is a multi-billion-dollar annual market across East Africa, served by a long tail of SME contractors who currently operate without software.

The solution

One platform for the entire bid journey — discovery → qualification → pricing → submission — plus the buyer side that issues and evaluates the tenders.

Contractors

Live matched feed, compliance matrix, deviation scanner, AI proposals, kanban pipeline, automation.

Buyers & entities

Block-based tender builder, conditional logic, reusable templates, applicant tracking, weighted bid evaluation.

Contractor workflow

- ✓ Live tender feed from official sources (PPDA, e-GP, World Bank, TED) — Uganda, Kenya, Tanzania, Rwanda
- ✓ Compliance matrix: every SBD requirement extracted into a checklist
- ✓ Deviation scanner that flags anything that would disqualify your bid before you submit
- ✓ Kanban pipeline with weighted value per column and next-best-action chips
- ✓ Automation: deadline guards, compliance gates, match alerts — in-app or by email

AI that does the work

AI proposal writer

Drafts technical sections grounded in the company's real capabilities and past performance — no placeholders.

Auditable agent

Dash AI plans and runs multi-step workflows with every action recorded and reviewable.

AI briefing & risk

Instant bid/no-bid scoring and risk briefs: compliance gaps, document risk, mitigations.

Extraction

Automatically extracts requirements from bidding documents into structured compliance data.

Buyer side: post & evaluate

Block-based builder

Headers, requirements, scoring criteria, document uploads, conditionals and tables — assembled like Notion.

Evaluation

Score submitted bids against your own weighted criteria in a color-coded matrix with ranking.

Conditional logic

"If estimated value > 500M, require an extra financial guarantee."
Evaluated automatically.

Reusable templates

Save standard sections and reuse them across tenders — stop rebuilding from scratch.

Traction

1,000+

tenders indexed from official
sources

countries live

5+

automated sources

24/7

sync, alerts & agents

Live product, demo-ready, with a full contractor pipeline and a buyer-side tender publishing & evaluation workspace already built.

Business model

Contractors — freemium

Free discovery; paid tiers for AI proposals, pricing, automation and reports.

Buyers — per-tender

Free first listing; subscription for the builder, templates and evaluation.

Value pricing in local currencies

UGX / KES / TZS / RWF with mobile-money-friendly pricing.

Land & expand

Land contractors free, monetize on submissions; buyers pay for volume and workflow.

Why Gulawo wins

Regional, not generic

Built for East African procurement: official sources, local currencies, local compliance rules.

Both sides of the market

Contractor bidding AND buyer publishing/evaluation on one platform — network effects.

AI where it matters

Proposals, briefings, extraction and an auditable agent — not chatbot gimmicks.

Compliance-first

The deviation scanner and compliance matrix prevent disqualification — the #1 SME pain point.

The ask

We are raising to scale the tender engine, onboard buyers, and grow the contractor base across the four markets.

- ✓ Grow the live tender index and refine matching accuracy
- ✓ Convert early contractor and buyer accounts into paying customers
- ✓ Expand to more sources and more East African markets

Let's build the tender OS for East Africa
